Prognosis Cardiology EMR specialty addresses the vast information needs of Cardiology physician. The Cardiology specific EMR includes clinically-defined templates for common Cardiology complaints, history of present illness and review of systems. The system also includes Cardiology specific ICD and CPT Codes that are used to capture accurate charges and quickly generate electronic Superbills at the point of care. To meet specific practice needs, Prognosis offers custom point-and-click templates as well as enhance current Cardiology templates.

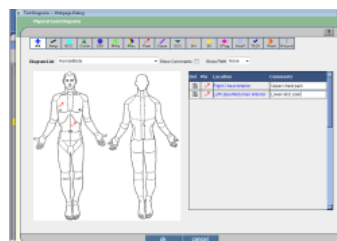

Patient Demographics - Fast and easy to enter patient demographics with insurance validation, referring physician, primary care provider and more.

The Face Sheet is the Electronic Medical Record. Instant access to relevant and historical information. Summarized view of the patient's medical record.

The Home screen gives a complete concise view of the medical practice. Client load, reason for visit, patient forms, status i.e. with PA, nurse or doctor...

Images and graphics enable further definition helping to diagnose your patients. Literally conduct an encounter from one or more images if desired.

Higher E&M Coding Levels

PrognosisCIS collects the ICD, CPT and HCPC codes during the History of Present Illness (HPI) section of the encounter in addition to other specialty tests you perform in your office.

During the E&M Coding portion of the encounter / practice management, PrognosisCIS suggests what needs to be updated, changed for higher billing.

Higher billing levels means more money for your medical practice!

Health Level 7 Interface / EDI

With the HL7 interface, collecting a patient's previous medical history is a breeze. Automated insurance validation in addition to drug prescriptions covered and not covered by a patient's insurance are all available features of PrognosisCIS EMR.

Customizable Templates

Everything from Vitals to Cardiology procedures and tests can be tailored to your exact requirements. In addition, ICD and CPT codes can be automatically tied to the templates, ensuring E&M coding is at the absolute highest possible level.

In addition, encounter workflows can be tailored to mimic your exact medical practice flow.

Octave Solutions Advantage

Reliable People

Certified medical and EMR consultants with an average tenure of 10 years with our company. We know medical practices and have years of experience helping medical practices like yours.

Reliable Answers

Octave Solutions support is 24 x 7 ensuring our clients always have the answers they need, when they need them. In addition, our self-help patient portal enables medical practices to get all the information they need, including training videos on demand.

Reliable Results

Octave Solutions has implemented hundreds of medical solutions nationwide, on-time and on-budget. Not only do we offer the absolute best value in software pricing, Octave Solutions delivers the results you can depend on.

Elimination of Paper

Imagine never having to pull another paper chart! In addition, imagine test results coming back from the labs and RAD in digital format, right into the Electronic Medical Record. Less scanning, less paper = more efficiency.

No More Transcription Fee's

Physicians can attach MP3's directly to patient records in addition to the use of Dragon Naturally Speaking thus automating the transcription process. Medical practices can save thousands of dollars in the course of a year.

ePrescribing

Receive Medicare and Medical incentives in addition to the ease of use prescribing medications for your patients. Print, Fax or ePrescribe medications to all participating pharmacies.

Business Intelligence Reporting

Great interface, easy to use, intuitive design make PrognosisCIS stand out from the competition. But if you don't have the tools to slice and dice your data, reporting can be limited or even costly. PrognosisCIS EMR has the BI reporting tools enabling medical practices to generate standard and ad-hoc reports with ease.
